

B. Amendment to the Claims

Please amend claims 21 and 28 and add new claims 31-34 as follows.

1-20. (Cancelled)

21. (Currently Amended) A multilayered structure resin molded product comprising a core layer and a skin layer,

wherein said resin molded product is injection-molded using a pulverized resin material, which is formed by pulverizing a molded product molded from a thermoplastic resin material, as a resin material for forming said core layer, and a virgin material as a resin material for forming said skin layer, and

wherein a board-shaped part of the entire portion of said resin molded product has a projecting portion for mounting another part, and said projecting portion is formed integrally with the skin layer only from the same material as the skin layer by setting a thickness of said projecting portion to be smaller than a thickness of the board-shaped part portion.

22. (Previously Presented) The product according to claim 21, wherein said projecting portion is a connecting portion having elasticity.

23. (Previously Presented) The product according to claim 21, wherein said projecting portion is a screw connecting portion.

24-27. (Cancelled)

28. (Currently Amended) A multilayered structure resin molded product comprising a core layer and a skin layer,

wherein said resin molded product is injection-molded using a pulverized resin material, which is formed by pulverizing a molded product molded from a thermoplastic resin material, as a resin material for forming said core layer, and a virgin material as a resin material for forming said skin layer, and

wherein a board-shaped part of the entire portion of said resin molded product has a projecting portion for mounting another part, and said projecting portion is formed integrally with the skin layer only from the same material as the skin layer by setting a height of said projecting portion to be greater than a thickness of the board-shaped portion by a specific value when a thickness of the projecting portion is greater than the thickness of the board-shaped part portion.

29. (Previously Presented) The product according to claim 28, wherein said projecting portion is a connecting portion having elasticity.

30. (Previously Presented) The product according to claim 28, wherein said projecting portion is a screw connecting portion.

31. (New) A multilayered structure resin molded product comprising a core layer and a skin layer,

wherein said resin molded product is injection-molded using a recycled resin material, whose properties have degraded from a virgin material, as a resin material

for forming the core layer, and a virgin material as a resin material for forming the skin layer, and

wherein a board-shaped part of the entire said resin molded product has a projecting portion for mounting another part, and said projecting portion is formed integrally with the skin layer only from the same material as the skin layer.

32. (New) The product according to claim 31, wherein a small-thickness portion is formed around said projecting portion of said resin molded product.

33. (New) The product according to claim 21, wherein a small-thickness portion is formed around said projecting portion of said resin molded product.

34. (New) The product according to claim 28, wherein a small-thickness portion is formed around said projecting portion of said resin molded product.
